TRAINING FOCUS

AI Agents

Claude Code

Agentic Development

Subagents

MCP

Cursor

Codex

GitHub Copilot

SEO

Content Marketing

Ad Creation

Agents for Leadership

Vibe Coding

TRAINING LANGUAGES

German (native)

English (fluent)

FORMATS

- > Half-day to multi-week workshops
- > On site or remote
- > Engineering, marketing & leadership teams
- > Conference talks & keynotes
- > Implementation consultancy

About

I'm an engineer who studied people.

B.Sc. Psychology (Osnabrück), M.A. Zeppelin University, top 2 % of my master's in management. I train engineering and marketing teams to hand real work to AI agents, so they get more done with the people they already have. As co-founder and CTO of The Happy Beavers for six years, I built the automation that cut manual processes by 80 % and let a core team of 11 run more than 150 freelancers. Engineers listen to someone who ships code; habits change with someone who knows why they formed.

WHAT TEAMS TAKE AWAY

Hand agents a whole ticket, not a prompt, and keep several running at once

Double the output with the same headcount, with guardrails that hold

A rollout that takes agents from a few enthusiasts to the whole team

Training Topics

● Agentic Development with Claude Code

The core: brief an agent with the ticket and its context, let it plan, edit and run the tests until they pass, then review and merge. The same workflows in Cursor, Codex and GitHub Copilot.

● Parallel Work, Subagents & MCP

Several agents, one engineer reviewing. Connecting agents to your issue tracker, docs, databases and internal APIs through MCP, so they work with your team's context.

● Quality at Volume & Team Rollout

Review practices and guardrails that hold as output rises, and taking agents from a few enthusiasts to the whole team.

● AI Agents for Marketing Teams

Agents for SEO, content marketing, ad creation, research and reporting, run on your own brand and campaigns. Plus Vibe Coding: from an idea to a working tool in a day, no developer needed.

● AI Agents for Leadership Teams

Run on your own company's work: which tasks to hand to agents, what to build, buy or leave alone, and a rollout your people actually follow.

Hands-on and adapted to each group: in-house on your own codebase and tasks, or as open courses. Further topics on request.

AVAILABLE FOR TRAINING, CONSULTING & TALKS lukabreitig.com

Training & Course Creation

Deutsche Telekom

Multi-module AI coding programme for engineering teams, via Cegos Integrata

financial.com

financial.com

Three-day hands-on Cursor AI workshop for the engineering team

Innomotics

In-house AI training for Siemens spin-off engineering teams

NobleProg

AI coding workshops via global IT training provider

Cegos Integrata

Commissioned trainer via leading European L&D provider

Code First Girls

Course creator of a 3-month AI & agentic tools curriculum

MARKETING & AGENCIES

The Happy Beavers

Co-founder & CTO: months of weekly AI training for the marketing agency team

Digitality Agency

Training for the design team in using LLMs for coding work

"We had a Cursor AI training with Luka. He is a highly competent trainer who answered all our questions thoroughly and adapted the course to our needs and preferences. I highly recommend working with him!"

Herbert Reiter, CTO, financial.com
